

*Cyber Security*

# Advisory Workshop

Our workshop is an advisory process that helps enterprises realize their current risk, revamp their strategy, and move forward with a roadmap toward remediation.

# *Our Approach*

## Zero Trust Methodology

The digital transformation has been accelerated by the recent rapid shift to remote work. With apps, users, and devices now outside the corporate data center and its firewall, demands on the network have been inverted and the attack surface has expanded for more sophisticated threats.

**The answer is the adoption of Zero Trust, a model guided by the idea that no one should have access until they've proven they should be trusted, regardless if they're on the "inside" or "outside."**

- ✓ Collaboration with your key stakeholders
- ✓ Future cyber security investments aligned to business priorities
- ✓ Tool set consolidation a natural outcome

# Our Process

TIMELINE: 8 - 10 WEEKS

## 1 *Discovery* 🔍

### Make risk real

We begin with an assessment of your environment to discover and identify risks, providing data and insight about your company's exposure.

## 2 *Workshop* 🗨️

### Align priorities

In a collaborative workshop, together we review identified risks, clarify goals, prioritize areas to address, and develop potential solutions.

## 3 *Roadmap* 🗺️

### Map a path

We provide a report that documents the engagement and delivers a customized cyber security roadmap with recommended action.

## 4 *Proposal* 🔧

### Take action

As a follow up to the report, we formalize the recommended action into a proposal to immediately begin the remediation plan and reduce risk.

**impelix**

# *Key Benefits*

## MOVE TO MATURITY

### Awareness

Based on actual data, gain awareness of your company's current exposure and the gaps in the existing architecture

### Alignment

Identify the gaps between the digital transformation of the business and cyber security to create complete alignment

### Clarity

With a roadmap of objectives and a proposal for action, gain a clear strategy to reduce risk and strengthen protection

Zero Trust isn't a switch you can turn on — it's a posture and path. Our Advisory Workshop helps companies map their own and move to cyber security maturity.

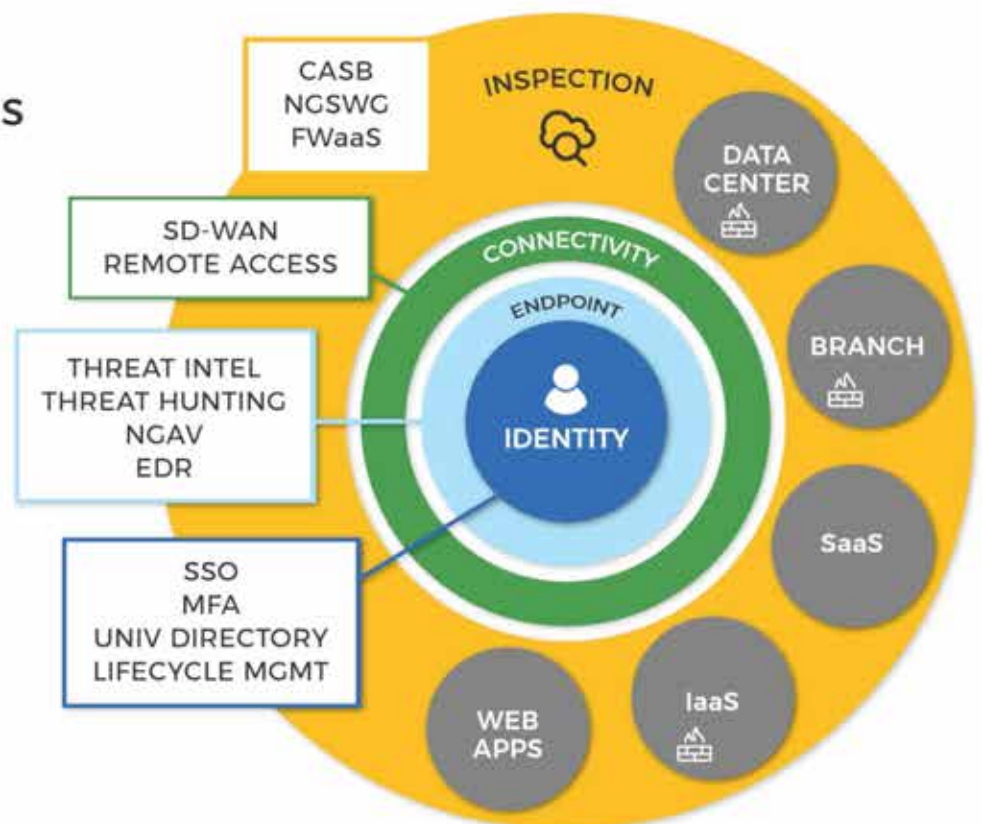

# Our Focus

## People are the new perimeter

If cyber security is no longer focused on the network, but the users, then identity is at the center – the doorman determining proper access. An identity-centric architecture based on Zero Trust ensures the right people have the right level of access to the right resources.

# Agenda

## TWO-DAY WORKSHOP

With the data from the discovery phase collected and reviewed, we lead a collaborative workshop with your company's key stakeholders across two sessions scheduled on consecutive days.

### *Day One*

- We review the company's current state of digital transformation, identifying projects and priorities that will impact cyber security
- Using the data gathered in discovery, we identify and rank current cyber security gaps, concerns, and areas of exposure for each domain

### *Day Two*

- We perform a deep dive into each domain, first grading its maturity, then whiteboarding possible solutions within the framework of Zero Trust covering people, process, and technology
- With our list of ranked concerns and outlined solutions, we lay out a timeline for the next 12 to 24 months as a first step toward the roadmap
